Marketing Campaign Performance Dashboard

Github Link: <https://github.com/Amina872/Power-BI/tree/main>

Problem Statement

You are working as a Marketing Analyst for a company that runs paid campaigns across several digital channels. Leadership needs a single, reliable view of how each campaign is performing — how many clicks and impressions it is generating, how well it is converting, and what return it is delivering on the money spent. This experiment builds a Marketing Campaign Performance Dashboard in Power BI that consolidates campaign type, channel, customer segment, and monthly trend data into one interactive report, so that stakeholders can quickly judge which campaigns and channels are worth scaling.

Methodology

The marketing_campaign_dataset (Campaign_ID, Campaign_Type, Channel_Used, Customer_Segment, Location, Clicks, Impressions, Conversion_Rate, ROI, Date) was imported into Power BI Desktop using Power Query, with column data types verified and Campaign_ID confirmed as a unique key. DAX measures were then created for the core KPIs, and the report was assembled using KPI cards, bar charts, a donut chart, and a trend line, tied together with slicers for Campaign_Type, Channel_Used, and Customer_Segment.

Data Visualization (creating a KPI dashboard with cross-filtering slicers):

DAX Measures Used

1. Total Campaigns:

- Total Campaigns = `DISTINCTCOUNT(marketing_campaign_dataset[Campaign_ID])`

Screenshot Image:

```
1 Total Campaigns =  
2 DISTINCTCOUNT(marketing_campaign_dataset[Campaign_ID])
```

2. Total Clicks:

- Total Clicks = `SUM(marketing_campaign_dataset[Clicks])`

Screenshot Image:

```
1 Total Clicks =  
2 SUM(marketing_campaign_dataset[Clicks])
```

3. Total Impressions:

- Total Impressions = `SUM(marketing_campaign_dataset[Impressions])`

Screenshot Image:

```
1 Total Impressions =  
2 SUM(marketing_campaign_dataset[Impressions])
```

4. Average Conversion Rate:

- Average Conversion Rate =
AVERAGE(marketing_campaign_dataset[Conversion_Rate])

Screenshot Image:

```
1 Average Conversion Rate =  
2 AVERAGE(marketing_campaign_dataset[Conversion_Rate])
```

5. Average ROI:

- Average ROI = AVERAGE(marketing_campaign_dataset[ROI])

Screenshot Image:

```
1 Average ROI =  
2 AVERAGE(marketing_campaign_dataset[ROI])
```

Dashboard Images

Image 1st:

It displays the overall Marketing Campaign Performance dashboard with no filters applied (Campaign_Type, Channel_Used, and Customer_Segment slicers all set to "All").

- Total Campaigns: 187K and Total Clicks: 96M, reflecting a large, multi-channel campaign portfolio.
- Total Impressions: 1.2Bn, Avg Conversion Rate: 7.4%, and Avg ROI: 4.83, indicating a healthy and consistent return across the full campaign base.
- The Average ROI by Campaign Type chart shows all five campaign types (Influencer, Search, Display, Social Media, Email) performing within a tight band, with Influencer campaigns slightly ahead (5.05) and Social Media trailing (4.52).
- Campaigns by Customer Segment are almost evenly split across the five segments (~19.6–20.4% each: Foodies, Tech Enthusiasts, Outdoor Adventurers, Health & Wellness, Fashionistas).
- Average ROI by Channel is fairly balanced across Facebook, Instagram, Google Ads, Website, and Email, with Instagram leading marginally at 5.10.
- Monthly Clicks Trend fluctuates between roughly 7.6M and 8.9M across the year, peaking in October with no single dominant season.

Figure 1: Marketing Campaign Performance Dashboard – Overall View

Image 2nd:

In the dashboard, after selecting "Instagram" in the Channel_Used slicer:

- All visuals are cross-filtered to show data for the Instagram channel only.
- The KPI cards update to Total Campaigns = 38K, Total Clicks = 21M, Total Impressions = 258M, Avg Conversion Rate = 7.6%, and Avg ROI = 5.07 — all slightly above the portfolio average.
- Average ROI by Campaign Type rises across the board within Instagram, led by Influencer campaigns at 5.22.
- Campaigns by Customer Segment stay balanced within Instagram (~19.7–20.3% each), showing no single segment dominates this channel.
- This confirms that Instagram-driven campaigns convert and return marginally better than the overall average, making it a strong candidate for incremental budget.

Figure 2: Marketing Campaign Performance Dashboard – Filtered by Channel_Used = "Instagram"

Business Insights

- The dashboard gives management a single, real-time view of overall marketing campaign performance.
- Total Clicks and Total Impressions together indicate how much reach and engagement each campaign is generating.
- Average Conversion Rate is the fastest way to judge whether traffic is actually turning into results.
- Average ROI lets stakeholders compare the financial return of different campaign types side by side.
- The Campaign Type breakdown highlights that Influencer and Email campaigns currently deliver the strongest ROI.
- Channel performance analysis shows Instagram and Email outperforming Google Ads on return, guiding where budget should shift next.
- The Monthly Clicks Trend surfaces seasonal peaks, useful for timing future campaign launches.
- Slicers for Campaign_Type, Channel_Used, and Customer_Segment let any stakeholder drill into a specific slice without needing a new report.

Conclusion

The Marketing Campaign Performance Dashboard successfully turns a large, multi-channel campaign dataset into an interactive, easy-to-read report. It lets users evaluate clicks, impressions,

conversion rate, and ROI across campaign types, channels, and customer segments in a few clicks. The cross-filtering slicers make it simple to isolate any one channel or segment and immediately see how it compares to the overall portfolio. Overall, the dashboard supports faster, more confident, data-driven decisions about where marketing budget should be spent next.
